Before updating, please pay attention to 2 points.
1: Connect the GPS satellite navigator device to your windows computer, copy the whole files and folders from the sat nav memory into any place on your computer, enabling re-installation should anything go wrong when updating maps files. Then disconnect from computer.

2: If you have question, please ask in the Ohrex group or send email (Read the end information)

Updating instruction

1. Please ensure that the GPS satellite navigator device is NOT connected to the computer.

2. Please download maps as per the size of your GPS satellite navigator device and countries.

Click on Download it will probably report that it is unable to scan please just click 'Download Anyway' The file should download into your default downloads folder. It will take some time, possibly up to 30 minutes. The downloaded file will be named NAVI.ZIP.

Once the file has completed downloading it will be necessary to extract the files from the zip file. In Windows 10 there should be an option built in. If you right click on the NAVI.zip file you should get the option to 'Extract here'. Alternatively we recommend using 7-zip which is a free program available from www.7-zip.org. An instruction sheet follows this document.

That will then unpack the necessary files.

CRASH.TXT
DATA.ZIP
NAVI.EXE
SYS.TXT
VAUTOV5.DLL

3. Connect GPS satellite navigator device to PC using usb cable originally provided.
4. Navigate to file explorer and find the GPS satellite navigator device as a usb drive.

5. Right click on the usb drive (sat Nav) and select Format, accept the defaults and click start.
6. The memory of GPS satellite navigator device will then be reformatted (this does not take many seconds)
7. You then need to copy all the folder NAVI from step 5 above into the sat nav this will take quite a while as it has to install all the software and maps.
8. When copying is completed disconnect the GPS satellite navigator device from the PC and it should be ready to go.

If the navigation program will not start please check the start-up path. Please follow the instructions below.
There is also video to understand how.
https://www.youtube.com/watch?v=5a50dAJCUNI

1. Go to NaviConfig.If not visible on start-up screen go into Settings and scroll right once and select NaviConfig there.
2. Tap in the box with 3 dots and screen should show a box with Resident Flash
3. Tap the Resident Flash box twice you should see a new box called NAVI
4. Tap NAVI box twice you should now see NAVI.EXE
5. Tap NAVI.EXE twice you should now see
   \Resident Flash\NAVI\NAVI.EXE in the gray box
6. Tap the green tick
7. Tap the Red cross
8. Tap GPS Navigation and you should be in business.

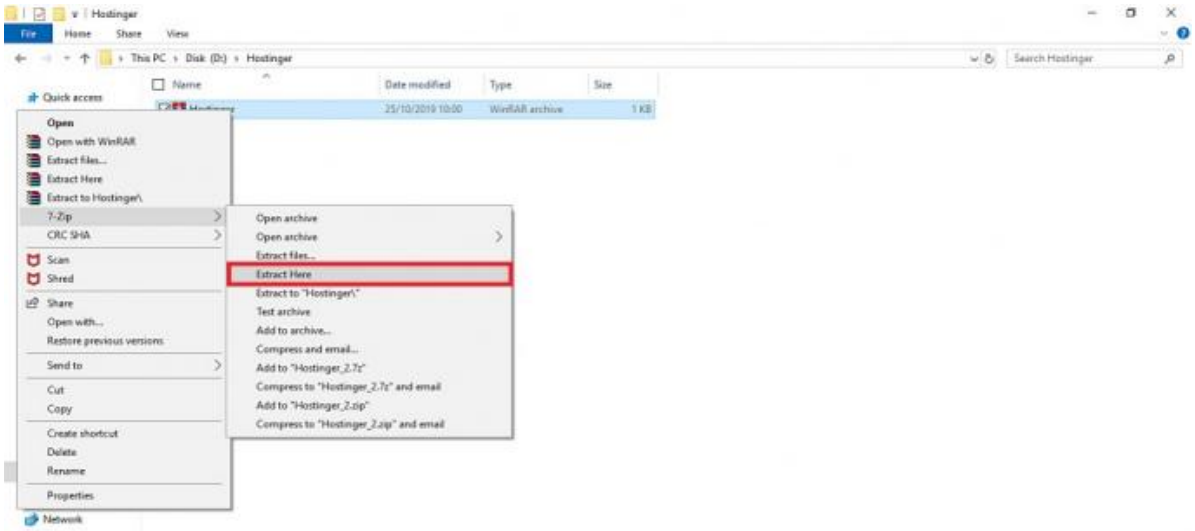

Please note that when starting the GPS satellite navigator device there may be a new icon on the bottom of the screen.This icon is not used at this time.

7-Zip Instructions

Download and install 7-Zip from here,
https://www.7-zip.org/download.html
Be sure to select the correct version. If using a modern computer/laptop with Windows 10 then select 2nd line ie 7-Zip for 64-bit Windows x64 (Intel 64 or AMD64)

Then follow the following instruction to decompress the file.

1. Right-click on the archive file, then select 7-Zip → Extract Here

2. 7-Zip will extract the files to the same directory as the original archive (ie.rar or.zip) file.
